Empathy Map 2

Helps the parents to locate their children in easy manner

focus is to have an SMS text enabled communication medium

Says

Does

Having more
features than
existing child
safety system
using IOT system

can be used in any mobile phones no need any expensive smartphones

Thinks

Feels

make a virtual connections between parent and their children

can send a text
with specific
keywords such
as "location"

Child wearable device the presence of child through mobile

provide real time location ,surrounding temperature and SOS light can be seen on the google map and capture the image

receive message via interactive GPS or GSM module

Need not to be a tech savvy to operate it In existing both wifi and bluetooth appear to be an unreliable medium of coomunication between the parent and child

High cost but once implemented, expenses can be reduced
